EXECUTIVE SUMMARY

The Sacramento Area Council of Governments (SACOG) is the designated Metropolitan Planning Agency for the Sacramento Region and is responsible for all regional transportation planning activities in Sacramento, Sutter, Yolo, and Yuba Counties, and in El Dorado and Placer Counties outside of the Tahoe Basin. For purposes of conformity, SACOG is responsible for the analysis of transportation activities in that area and in eastern Solano County. Presented in this report is the Conformity Analysis for the adoption of the 2025 Metropolitan Transportation Improvement Program (MTIP) and 2023 Metropolitan Transportation Plan (MTP) Amendment #1.

The conformity demonstration requirement is described in the Clean Air Act Section 176(c) (42 U.S.C. 7506(c)) and U.S. Environmental Protection Agency (EPA) transportation conformity regulations (40 CFR 93 Subpart A). Transportation conformity ("conformity") is a way to ensure that Federal funding and approval goes to those transportation activities that are consistent with air quality goals set for ozone, particulate matter, or nitrogen dioxide. The analysis presented in this report demonstrates that the MTIP and concurrent MTP Amendment meets the criteria specified in these regulations.

CONFORMITY REQUIREMENTS

Conformity must be demonstrated in "all nonattainment and maintenance areas for transportation-related pollutants for which the area is designated nonattainment or has a maintenance plan" (40 CFR 93.102). The following are the designations within the Sacramento region:

- 2008 8-Hour Ozone (including the ROG and NO_x precursors) Severe-15 Nonattainment Area:
 - The Sacramento Metropolitan Area (Sacramento, Yolo and portions of El Dorado, Placer, Sutter, Solano Counties) and
 - The Sutter Buttes Area (Sutter County). The 2008 ozone standards classify the Sutter Buttes Area as an unclassified/attainment area for ozone, effective July 20, 2013.
- 2015 8-Hour Ozone (including the ROG and NO_x precursors) Serious Nonattainment Area:
 - The Sacramento Metropolitan Area (Sacramento, Yolo and portions of El Dorado, Placer, Sutter, Solano Counties), effective August 13, 2021.
 - The Sutter Buttes Area (Sutter County). The 2015 ozone standards classify the Sutter Buttes Area as a marginal nonattainment area for ozone, effective June 4, 2018.
 - An update and concurrent redesignation request is under development by the regional air districts and CARB to redesignate the area to Severe.
- Particulate Matter (PM₁₀) Maintenance Area (Sacramento County), effective October 28, 2013.
 - The Second Maintenance Plan approved March 14, 2024, effective April 15, 2024.
- 2006 Fine Particulate Matter (PM_{2.5}) Nonattainment Area and Maintenance Area:
 - Moderate Nonattainment Area - Sacramento Area (Sacramento and portions of Yolo, Solano, Placer and El Dorado Counties)
 - Maintenance Area -Yuba City-Marysville Area (Sutter and a portion of Yuba County)
 - The second PM_{2.5} Maintenance Plan is pending both review and approval by CARB and then EPA.

Under a determination of conformity, the following criteria are applied:

1. The latest planning assumptions and emission models are used.
2. The transportation plan and program pass an emissions budget test using a budget that has been found adequate or been approved by EPA or an interim emissions test where budgets have not been established.
3. The transportation plan and program provide for the timely implementation of transportation control measures (TCMs).
4. Interagency and public consultation are part of the process.

SACOG follows the interagency review process described in SACOG's Public Participation Plan. The dedicated interagency forum for this process is the bi-monthly Regional Planning Partnership meeting. Upon reaching a determination finding that is approved by SACOG's Board, the conformity analysis is submitted to Federal Highway Administration (FHWA) and Federal Transit Administration (FTA) for final approval in consultation with Caltrans.

The Conformity Checklist developed by FHWA contains items required for completing a determination. This list is included for reference in Appendix A.

CONFORMITY TESTS

Federal conformity regulations describe two types of tests; an emissions budget test and an interim emissions test. To run an emissions budget test, a region must have budgets in place that have been found adequate for transportation conformity purposes or are contained in an approved air quality implementation plan. Predicted emissions for the MTIP and MTP Amendment #1 must be less than or equal to these budgets. The second test, an interim emissions test is used when approved or adequate budgets are not in place and the region is in nonattainment. Predicted emissions for the MTIP and MTP Amendment #1 must be less than or equal to emissions predicted in the baseline scenario. Applicable air quality implementation plans and conformity tests are further described within the text.

FINDINGS OF THE CONFORMITY ANALYSIS

A regional emissions analysis was conducted for the years 2026, 2027, 2029, 2032, 2033, 2035, and 2044 for each applicable pollutant. See Appendix C, Table 1, for the analysis years for each pollutant. Each analysis utilized the latest planning assumptions and emissions models. The conclusions of the SACOG analysis are:

- Ozone: The Analysis determined that the implementation of the MTIP and MTP Amendment #1 would result in less total regional on-road vehicle-related emissions (ROG and NOx) than the emissions budget found adequate by the EPA in the *Sacramento Regional 2008 NAAQS 8-Hour Ozone Attainment Plan and Reasonable Further Progress Plan*, and the *Sacramento Metro Area portion of the "2018 Updates to the California State Implementation Plan*. This analysis has used these budgets for demonstration of the 2008 and 2015 standards.
- PM₁₀: The Analysis determined that the implementation of the MTIP and MTP Amendment #1 would result in less total regional on-road vehicle-related emissions than the emissions budget found adequate by the EPA in the *2010 PM₁₀ Implementation/Maintenance Plan and Re-designation Request for Sacramento County*. EPA approved the *Second 10-Year PM₁₀ Maintenance Plan* on March 14, 2024, effective April 15, 2024.

- $PM_{2.5}$: The Analysis determined that the total regional on-road vehicle-related emissions associated with the implementation of the MTIP and MTP Amendment #1 for the analysis years are projected to be less than or equal to the emissions for the Baseline scenario, satisfying the test established in *Interim Transportation Conformity Guidance for 2006 $PM_{2.5}$ NAAQS Nonattainment Areas* in the Sacramento area. The Analysis also found that implementation of the 2023 MTP and 2025 MTIP would result in less total regional on-road vehicle-related emissions than the emissions budgets found adequate by the EPA in the 2014 *Yuba City-Marysville $PM_{2.5}$ Maintenance Plan and Re-designation Request*.
- TCMs: The implementation of the MTIP and MTP Amendment #1 will not impede the timely implementation of the TCMs identified in the 2009 *8-Hour Ozone Attainment and Reasonable Further Progress Plan*, 2013 revisions. TCMs identified for the 2015 SIP, in the approval process, are included for reference.
- Consultation for this analysis was conducted in accordance with SACOG's Public Participation Plan.
- Both the MTIP and MTP Amendment #1 have been financially constrained consistent with 40 CFR 93.108 and with 23 CFR Part 450.

CONFORMITY DETERMINATION

OVERVIEW OF THE PHYSICAL ENVIRONMENT

The Sacramento Valley Air Basin is a basin bounded by the Sierra Nevada Mountain Range to the east and the Coastal Mountain Ranges to the west and spans from Shasta County in the north to Sacramento County in the South. Topography in the Sacramento Valley is generally flat, with elevations anywhere from slightly below sea level near the Sacramento/San Joaquin Delta to over 2,150 feet above sea level at the Sutter Buttes. Hot dry summers and mild rainy winters characterize the Mediterranean climate of the Sacramento Valley Air Basin (SVAB). During the year the temperature may range from 20 to 115 degrees Fahrenheit with summer highs usually in the 90s and winter lows occasionally below freezing. Average annual rainfall is about 20 inches with about 75 percent occurring during the rainy season generally from November through March. The prevailing winds are moderate in strength and vary from moist clean breezes from the south to dry land flows from the north.

The mountains surrounding the SVAB create a barrier to airflow, which can trap air pollutants when certain meteorological conditions exist. The highest frequency of air stagnation occurs in the autumn and early winter when large high-pressure cells lie over the Sacramento Valley. The lack of surface wind during these periods and the reduced vertical flow caused by less surface heating reduces the influx of outside air and allows air pollutants to become concentrated in a stable volume of air. The surface concentrations of particulate matter pollutants are highest when these conditions are combined with smoke or when temperature inversions trap cool air, fog, and pollutants near the ground.

The ozone season (May through October) in the Sacramento Valley is characterized by stagnant morning air or light winds, with the delta sea breeze arriving in the afternoon out of the southwest. In addition, longer daylight hours provide a plentiful amount of sunlight to fuel photochemical reactions between reactive organic gases (ROG) and oxides of nitrogen (NO_x), which result in ozone formation. Likewise, PM_{2.5} peak concentrations typically occur during the winter season (November – February) when temperature inversion and low wind speeds trap and concentrate PM_{2.5} emissions, cooler temperature and high humidity increase the secondary formation of particulates.

As an air basin, air quality in the Sacramento region is impacted not only by pollutants generated within the region, but also by pollutants generated in the San Francisco Bay Area and the San Joaquin Valley, which are carried into the Sacramento region by Delta breezes. The effect of pollutants transported from the San Francisco Bay Area or from the San Joaquin Valley on air quality in the Sacramento region can vary from substantial to inconsequential on any given day, largely determined by accompanying meteorological conditions. Thus, the success of the Sacramento region in attaining better air quality is partially contingent on the achievement of better air quality in nearby areas that affect Sacramento's air quality.

INTRODUCTION

The Sacramento Area Council of Governments (SACOG) is the designated Metropolitan Planning Organization (MPO) for the Sacramento Region and is responsible for all regional transportation planning activities in Sacramento, Sutter, Yolo, and Yuba Counties, and El Dorado and Placer Counties outside of the Tahoe Basin. Presented in this report is the Conformity Analysis for the MTIP and MTP Amendment #1. Transportation conformity ("conformity") is a way to ensure that Federal funding and approval goes to those transportation activities that are consistent with air quality goals set for ozone, particulate matter, or nitrogen dioxide. The SVAB is composed of the six counties listed above and the portion of Solano County which is located to the east of the crest of the Coastal Mountain Range. Solano County is located within the jurisdiction of the Metropolitan Transportation Commission for the purpose of transportation planning activities; because the eastern portion of the county is in the SVAB it is included in SACOG's conformity analysis.

SACOG performed an air quality conformity determination on the MTIP and MTP Amendment #1 for the following stated designation areas:

- 8-Hour Ozone (including the ROG and NO_x precursors) Severe-15 Nonattainment Area:
 - The Sacramento Metropolitan Area (Sacramento, Yolo and portions of El Dorado, Placer, Sutter, Solano Counties) and
 - The Sutter Buttes Area (Sutter County). The 2008 ozone standards classify the Sutter Buttes Area as an unclassified/attainment area for ozone, effective July 20, 2013.
- 2015 8-Hour Ozone (including the ROG and NO_x precursors) Serious Nonattainment Area:
 - The Sacramento Metropolitan Area (Sacramento, Yolo and portions of El Dorado, Placer, Sutter, Solano Counties), effective August 13, 2021.
 - The Sutter Buttes Area (Sutter County). The 2015 ozone standards classify the Sutter Buttes Area as a marginal nonattainment area for ozone, effective June 4, 2018.
- Particulate Matter (PM₁₀) maintenance area (Sacramento County); both approved and pending budgets.
- Fine Particulate Matter (PM_{2.5})
 - Moderate Nonattainment area of Sacramento Area (Sacramento and portions of Yolo, Solano, Placer, and El Dorado Counties)
 - Maintenance area of Yuba City-Marysville Area (Sutter and a portion of Yuba Counties)

The SACOG Board of Directors is scheduled to act on this conformity determination at its September 19th, 2024, meeting. For this conformity determination, the conformity analysis performed for the 2025 MTIP is consistent with the analysis performed for the MTP Amendment #1. The following emissions analysis demonstrates that the MTIP and MTP Amendment #1 meets the emissions conformity tests based on the Transportation Conformity requirements found in the Federal Clean Air Act, Section 176(c) (42 U.S.C. 7506(c)), and Title 40, Code of Federal Regulations (CFR), Part 93, Subpart A for the federally-designated nonattainment areas as noted in the following section.

BACKGROUND

Federal regulations require that the Sacramento Area Council of Governments (SACOG) prepare air quality conformity determinations for its transportation plans and programs. The purpose of the

conformity determination is to ensure that SACOG's plans and programs "conform" to all applicable federal air quality requirements. Based on guidance found in the Federal Clean Air Act, Section 176(c) (42 U.S.C. 7506(c)), and Title 40, Code of Federal Regulations, Part 93, Subpart A, conformity determinations must be based upon the most recent estimates of on-road vehicle-based emissions. The emissions estimates must also be based upon the most recent population, employment, travel and congestion forecasts from SACOG, acting as the federally-designated MPO for the Sacramento region (see Appendix C, Table 2).

SACOG has an emissions conformity procedure based on the modeling requirements contained in the Federal Clean Air Act, Section 176(c) (42 U.S.C. 7506(c)), and Title 40, CFR, Part 93, Subpart A. As part of this procedure, SACOG prepares a series of forecasting model runs for the Sacramento air quality planning areas using the Sacramento Activity-Based Travel Simulation Model (SACSIM) travel demand model. This model uses estimates of population, employment and travel patterns for 2016, as the "base year," and future estimates of these same parameters for a series of future years. The future years are designated as "milestone" or "horizon" years for certain types of pollutant emissions, under EPA regulations. The SACSIM travel demand model is used to estimate daily vehicle miles traveled (VMT) in five-mile-per-hour increments for each model run. The total number of trips for each model run is also generated. The daily VMT from each generated model run are then used as inputs to the vehicle-emissions forecasting model, EMFAC 2017; SACOG includes VMT data as provided by the Metropolitan Transportation Commission to account for projects in the eastern portion of Solano County. The EMFAC 2017 model forecasts emissions based on the travel-related forecasts from both models.

CONFORMITY APPROACH

The last conformity determination for the Sacramento Ozone Nonattainment Area, PM₁₀ Maintenance Area, and PM_{2.5} Maintenance Area and Nonattainment Area was adopted by the SACOG Board of Directors on November 9, 2023. The full conformity finding was approved by FHWA/FTA on February 6, 2024. (93.114).

The conformity tests for the Sacramento Ozone Nonattainment, PM₁₀ maintenance, and PM_{2.5} Maintenance Area and Nonattainment Areas consist of a quantitative emissions analysis; a budget test for ozone, PM₁₀, and the Yuba City-Marysville PM_{2.5} maintenance area, and an interim Baseline test for PM_{2.5} nonattainment areas without an approved plan or adequate budgets. Details can be found within Appendix C.

The conformity determination for the Sutter Buttes Ozone Nonattainment Area does not require a quantitative regional emissions analysis because the transportation projects and planning assumptions for both the Build and No-Build scenarios for all potential analysis years are the same. (93.119 (g) (2)).

FINANCIAL CONSTRAINT

SACOG is required to demonstrate that the MTIP and MTP Amendment #1, and amendments thereof, are financially constrained. Specifically, SACOG must show that it is reasonable to assume that funds will be available to pay for the projects included in the program and plan. Approximately \$35 billion has been identified that will come to the region to pay for transportation investments

between 2016 and 2044. A summary of how these funds will be spent is shown in Chapter 4 of the 2025 MTIP; included in Chapter 3 of the plan is a discussion describing how the 2025 MTP meets the test of financial constraint. Detailed revenue estimates by five-year increments are shown in Appendix B of the 2023 MTP. Also listed are the assumptions behind the revenue estimates. Identified within the MTIP is additional documentation showing constraint of the program over the next four years (93.108). Additional information can be found in supplemental documentation developed for the 2023 MTP, Appendix B.

INCLUSION OF ALL FEDERAL AND REGIONALLY SIGNIFICANT PROJECTS

The 2025 MTIP and concurrent MTP Amendment, and amendments thereof, include all federal and regionally significant projects expected to occur in the nonattainment and maintenance areas as identified in the introduction above (93.106).

Appendix B details the scope of projects included in the 2025 MTIP and the concurrent MTP amendment to allow adequate representation in the travel model to determine the interaction between regionally significant facilities, route options, travel times, transit ridership, and land use. It includes the following project list break-outs:

- *Non-exempt Project Listing:* All planned projects determined to be regionally significant and not exempt from regional conformity analysis requirements. Regionally significant projects are projects that are located on a principal arterial or a functionally equivalent transit facility; on a highway or transit facility that is part of the regional modeling network; or other road or transit project that are considered regionally significant through Interagency Consultation.
- *Exempt Project Listing:* All planned projects that are exempt from regional conformity analysis requirements (40 CFR 93.126-128). Projects are assigned specific exempt categories upon amendment into the MTIP; exempt projects in the MTP are all categorized as "MTP Exempt".
- *Eastern Solano County Project Listing:* The exempt and non-exempt/regionally significant projects located outside of SACOG's metropolitan planning area in eastern Solano County, as provided by Metropolitan Transportation Commission.

LATEST PLANNING ASSUMPTIONS

The emission estimates developed for this conformity determination are based on the population and employment projections for the Sacramento and Yuba/Sutter areas that was approved by the SACOG Board of Directors in December 2017 as part of the 2020 MTP/SCS development, and the latest population growth projections for the 2025 Blueprint development. The planning assumptions list was approved by SACOG's Regional Planning Partnership at the January 26, 2023, meeting. The finalized list of the assumptions used in developing this conformity determination can be found in Appendix C, Table 7. (93.110 a, b).

LAND USE ASSUMPTIONS

In November of 2022, the SACOG Board of Directors authorized SACOG staff to pursue state legislation to extend the Blueprint (SACOG's Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS)) schedule, which would move the plan adoption date from Spring

2024 to Fall 2025. Since then, Assembly member Aguiar-Curry introduced a bill (AB 350) that will provide SACOG with the legislative authorization needed to keep the current SCS in compliance with state law for an additional two years. The legislation was approved by the Governor on October 10, 2023. This legislation went into effect on January 1, 2024. In the meantime, SACOG continues to work toward updating the region's long-range vision and plan for 2050. The 2023 Federal MTP largely carried forward the projects, programs, and policies included in the 2020 MTP/SCS, while development of the 2025 Blueprint continues.

The land use assumptions for the plan were developed in cooperation with local jurisdictions. A regional growth projection was adopted by the SACOG Board of Directors in December 2017 for the purposes of developing the 2020 MTP/SCS. The population for 2044 was extrapolated from the current plan's 2040 horizon year using the latest growth assumptions developed by SACOG.

This projection consists of a projected economic growth rate that was tied to a demographic forecast, which was then tied to a forecast of the number of new housing units that will be needed throughout the region through 2040. The forecast closely aligns with Regional Housing Needs Assessment (RHNA) projections, and coordinates with the California Department of Housing and Community Development and the California Department of Finance forecasts.

Growth rates and patterns within an area are influenced by various local, regional and national forces that reflect ongoing social, economic and technological changes. Ultimately, the amount and location of population growth and economic development that occurs within a specific area is determined by market forces, and regulated by city and county governments through zoning, land use plans and policies, and decisions regarding development applications. Local government and other regional, state and federal agencies also make decisions regarding the provision of infrastructure (e.g. transportation facilities, water facilities, sewage facilities) and protection of natural resources that may influence growth rates and the location of future development.

The 28 SACOG jurisdictions are at various stages of updating or augmenting their local land use plans. Since the adoption of the Blueprint Vision by the SACOG Board of Directors in December 2004, a number of jurisdictions in the region have been voluntarily implementing the Blueprint smart growth principles into their planning processes. The general plan and specific plan development activities occurring in the region by the local jurisdictions are reflected in the 2044 land use forecast that accompanies the population, housing and employment forecasts for the 2020 MTP/SCS. The 2020 MTP/SCS land use assumptions are based on the best information available (93.122). A discussion of the land use allocation at the jurisdictional level is included in Appendix C of the 2020 MTP/SCS (93.122 b 1 iii²).

TRANSPORTATION SYSTEM

As part of the 2025 MTIP, all financial, highway, and transit system characteristics were reviewed and updated to reflect the most recent planning assumptions. Transportation plans often focus on improving mobility through investment in transportation infrastructure and services. Measures of mobility, such as the percent of travel using a particular travel mode or mode share, travel time, and travel delay provide valuable information about how well current and planned transportation systems function. Through the course of the entire 2020 MTP/SCS planning process and SACOG's

ongoing Congestion Management Process (CMP), the performance focus has been on the following critical indicators:

- vehicle miles traveled (VMT) on the region's roadways;
- the level of congestion and delay for all modes, but especially roadway congestion;
- transit ridership and the share of trips made by transit modes; and
- travel by non-motorized travel modes (bike and walk) and the share of trips made by those modes.

A major part of the performance outcomes of this MTP relates to a heightened emphasis on maintenance of the transportation system. This emphasis resulted in a critical look at investments which expand the transportation system. To the extent that some system expansion investments can be delayed, greater investment can be made in maintenance of the system. From the perspective of plan performance, the challenge is to make this change in emphasis in investments without sacrificing the high performance achieved in prior plans.

LATEST EMISSIONS MODEL

One of the critical inputs into determining emissions associated with the 2025 MTIP and concurrent MTP Amendment is the selection of which emissions factors to use. EMFAC 2017 was used in this conformity analysis, which began on April 24, 2024 when the Regional Planning Partnership approved the conformity planning assumptions, as shown in Appendix C. EMFAC 2017 was approved by EPA on August 15, 2019 and can be used for transportation conformity in California until November 15, 2024.

The EPA/USDOT January 18, 2001, guidance on latest planning assumptions and EPA's July 2004 final rule, indicate that new vehicle registration data must be used when it is available prior to the start of new conformity analyses and that states should update the data at least every five years. The State of California reaffirmed their commitment to keeping the latest planning assumptions included in EMFAC updated on a three-year cycle. On January 31, 2006, California Air Resources Board (CARB) submitted a letter to the EPA and to the California Division of the FHWA indicating the State's intention to update future revisions to EMFAC on a three-year basis. These EMFAC updates would reflect, among other new information, updated vehicle fleet data.

The most recent version of EMFAC, EMFAC 2021 was approved for use by EPA on November 15, 2022. This newer version must be used as described in EPA's notice (87 FR 68483) for all new regional emissions analyses for transportation conformity purposes that are started on or after November 15, 2024.

MODELING DOCUMENTATION

SACOG's traffic model uses land use inputs (socioeconomic data) by parcel for trip generation. These socioeconomic data are expressed in terms of households and employment, and a representative population file which is consistent with the land use data and reflects the demographic forecasts adopted by the SACOG Board for use in development of the long-range transportation plan.

SACOG uses the SACSIM travel demand model. The model consists of four sub-models to account for different types of travel in the region: an activity-based sub-model which accounts for all

household trips generated within the region, except airport passenger trips; a commercial vehicle sub-model which accounts for all travel by commercial vehicles, including trips by large trucks; an airport passenger ground-access model, which accounts for travel by air passengers to the Sacramento International Airport; and an external travel sub-model, which accounts for all travel within the region by travelers with origins or destinations outside the region, or travelers through the region. The travel demand estimates from the four sub-models are combined to represent total weekday travel demand in the SACOG region. SACOG periodically updates and improves the SACSIM model, and rolls up those improvements into numbered versions, for use in the analysis of the MTP/SCS. SACSIM19 was used for analysis of the 2023 MTP Amendment #1 and 2025 MTIP, and for this air quality conformity analysis. More detailed information about SACSIM19 can be found on the SACOG website (<https://www.sacog.org/modeling>).

SACSIM19 is also used by Caltrans and many of SACOG's member agencies for their own transportation analyses, and SACOG is in regular communication with the many users of the model. Adjustments or changes to the model suggested by external users are reviewed by SACOG staff and may be incorporated into ongoing updates and releases of the model. SACOG also get public comment and input on SACSIM at annual Travel Model Users' Conferences (<https://www.sacog.org/travel-model-users-conference>), including comments on proposed changes and improvements to SACSIM.

The highway, transit, and bike and walk systems in the SACOG region are represented in detailed link-and-node computer networks. Link types include freeway, freeway ramp, expressway, arterial, and collector. Current and future-year road networks were developed for the 2023 MTP Amendment #1. The model uses equilibrium, a capacity sensitive assignment methodology, and the data from the model for the emission estimates to differentiate between peak and off-peak volumes and speeds. In addition, the model is reasonably sensitive to changes in time and other factors affecting travel choices. The results from model validation/calibration were analyzed for reasonableness and compared to historical trends.

The travel demand model estimates travel demand and traffic volumes for the A.M. three-hour peak period, P.M. three-hour peak period, a five-hour midday period, and a thirteen-hour late evening/early morning period. Daily forecasts are calculated by summing the four time periods.

SACOG completed the development of the SACSIM travel demand model and its validation to a new base year of 2016. The model was validated by comparing its estimates of peak, off-peak and daily traffic levels to available peak, off-peak and daily traffic counts. The model validation meets standard criteria for replicating total traffic volumes on various road types and for percent error on links. The validation also meets standard criteria for percent error relative to traffic counts. The model has been extensively tested and validated by SACOG staff.

The conformity regulation (93.122 b 3) states that Highway Performance Monitoring System (HPMS) estimates of VMT shall be considered the primary measure of VMT within a non-attainment area for the classes of roadways included in HPMS. The regulation also allows locally-developed count-based programs. SACOG uses both HPMS estimates and a database of local traffic counts. HPMS estimates of VMT by county are used to validate model estimates of VMT. Locally developed traffic counts are used to validate traffic assignments by functional class of roadway and for regional screenlines, as well as to evaluate assignment error levels for different facility types.

Estimates of regional transportation-related emissions, that are used to support conformity determinations, must be made in accordance with the procedures laid out in the Federal Clean Air Act, Section 176(c) (42 U.S.C. 7506(c)), and Title 40, Code of Federal Regulations, Part 93, Subpart A. SACOG's SACSIM Travel Demand model, which was used to develop transportation-related emissions for the Sacramento nonattainment areas, currently meets all the modeling requirements as set forth in the Federal Clean Air Act, Section 176(c) (42 U.S.C. 7506(c)), and Title 40, Code of Federal Regulations, Part 93, Subpart A.

AIR QUALITY EMISSIONS ANALYSIS

In order for SACOG to make a conformity determination on the 2025 MTIP and concurrent MTP Amendment, a quantitative emissions analysis must be performed for the Sacramento air quality planning areas. SACOG has completed a quantitative emissions analysis for the nonattainment and maintenance areas as shown below and in Appendix C. SACOG prepares estimates of emissions for the Sacramento air quality planning areas for the analysis years described below. Estimates of emissions are prepared in accordance with the conformity regulations found in the Federal Clean Air Act, Section 176(c) (42 U.S.C. 7506(c)), and Title 40, Code of Federal Regulations, Part 93, Subpart A.

YEARS OF ANALYSIS

The analysis years of 2026, 2027, 2029, 2032, 2033, 2035 and 2044 were chosen for the Sacramento air quality planning areas for the following reasons:

- 2026 is an attainment year for ozone under the 2015 NAAQS. It is also a proposed budget year for PM_{2.5} for the Yuba City-Marysville Maintenance Area.
- 2027 is a proposed budget year for PM₁₀ as part of the Second Maintenance Plan and represents a horizon year that is less than ten years apart from the last year of the plan under section 93.106 (a) (1).
- 2029 is a proposed budget year for ozone as part of the 2015 standard for severe non-attainment areas.
- 2032 is a proposed budget year for ozone for severe non-attainment areas.
- 2033 is a proposed attainment year for PM₁₀ as part of the Second Maintenance Plan.
- 2035 represents a horizon year that is less than ten years apart from the last year of the plan under section 93.106 (a) (1). It is also a proposed budget year for PM_{2.5} for the Yuba City-Marysville Maintenance Area.
- The year 2044 represents the last year of the transportation plan's forecast period and, therefore, is required to be an emission analysis year, as specified under section 93.106 (a)(iv) of the conformity regulation.

ANALYSIS TECHNIQUES

The analysis techniques that were used for generating Reactive Organic Gases (ROG) and Nitrogen Oxides (NOx) emissions for the conformity submittal are documented in the following section. Specifically, SACOG employed its SACSIM travel demand model for the Sacramento Ozone Nonattainment Area to generate trips and daily VMT for each alternative scenario. The outputs from

the SACSIM model were then inputted into EMFAC 2017 to generate emissions. Emission projections for Ozone were made for the years 2026, 2029, 2032, 2035, and 2044.

For the PM₁₀ analysis, SACOG utilized a combination of analysis methods. The direct exhaust for PM₁₀ came from EMFAC 2017 vehicle emissions model. The paved road dust component of PM₁₀ was analyzed using the AP-42 methodology denoted in EPA's *Official Release of the January 2011 AP-42 Method for Estimating Re-Entrained Road Dust from Paved Roads*; the road dust calculations have been updated to reflect this methodology. Specifically, the emission factor equation and k value (particle size multiplier) have been updated accordingly while CARB default assumptions for roadway silt loading by roadway class, average vehicle weight, and rainfall correction factor remain unchanged. Emissions are estimated for all roadway classes including freeways, arterials, collectors, local, and rural roads.

Section 93.122(e) of the Transportation Conformity regulation requires that PM₁₀ from construction related fugitive dust be included in the regional analysis, if it is identified as a contributor to the nonattainment problem in the PM₁₀ implementation plan. The road construction dust component of PM₁₀ was analyzed using the CARB's methodology outlined for estimating fugitive dust particulate matter due to construction activities while building roads. The emission estimates are based on the methodology in which miles of new road built are converted to acres disturbed, which is then multiplied by a generic project duration and an emission rate. Emission factors are unchanged from the previous estimates at 0.11 tons PM₁₀/acre-month of activity. The emission factor includes the effects of typical control measures, such as watering, which is assumed to reduce emissions by about 50%.

The activity data used in the calculation of all PM₁₀ components (direct emissions, paved dust and construction dust) came from SACOG's travel demand model. Emission projections of PM₁₀ were made for the years , 2027, 2033, 2035, and 2044. The methodology employed the EMFAC 2017 vehicle emissions model.

SACOG performed a PM_{2.5} analysis for the Sacramento non-attainment area. Specifically, SACOG employed its SACSIM travel demand model for the nonattainment area to generate trips and daily VMT, and the outputs from the SACSIM model were then inputted into EMFAC 2017 to generate emissions. Emission projections of PM_{2.5} using the baseline test approach were made for the years 2026, 2027, 2035, and 2044. The baseline year for the nonattainment area is 2008 and hence, all emissions for future years were compared against the 2008 PM_{2.5} emissions.

SACOG also performed a PM_{2.5} analysis for the Yuba City-Marysville PM_{2.5} Maintenance Area employing its SACSIM travel demand model for the Yuba City-Marysville Maintenance Area to generate trips and daily VMT, and the outputs from the SACSIM model were then inputted into EMFAC 2017 to generate emissions. Emission projections of PM_{2.5} using the budget test approach were made for the years 2026, 2027, 2035, and 2044.

Geography, test type, and analysis years can be found in Appendix C, Table 1 and Figure 1. Additionally, details specific to Solano County can also be found there.

EMISSION CALCULATIONS

Once the analysis years have been selected, SACOG uses its SACSIM travel demand model to generate daily VMT and speed profile for each analysis year in question using population and employment assumptions, as shown in Appendix C, Table 2. The outputs from the transportation model are then inputted into a PC-based version of EMFAC 2017, which is used to generate emissions. Note that Table 2 reports VMT for the entire SACOG modeling region, including eastern Solano County; because different subareas within the region are used for each criteria pollutant, the VMT used as inputs to EMFAC 2017 vary for specific emissions calculations.

EMISSIONS BUDGET TEST FOR OZONE (ROG AND NOX)

Under the emissions budget test, all future year ROG and NOx emissions associated with the 2023 MTP Amendment #1 and 2025 MTIP must be equal to or less than the budgets found to be adequate from the *2018 Updates to the California State Implementation Plan* for the Sacramento Ozone Nonattainment Area. The years reflect EPA action regarding the final implementation rule for the 2015 and 2008 NAAQS.

Appendix C, Table 4, shows that ROG and NOx emissions associated with this analysis are less than the budgets contained in the *2018 Updates to the California State Implementation Plan*.

EMISSION FORECASTS FOR THE SUTTER BUTTES OZONE NONATTAINMENT AREA

A regional emission analysis under Section 93.122 of the Conformity Regulations is not required for the Sutter Buttes Ozone Nonattainment area because the transportation projects and planning assumptions for the area would be the same for all analysis years. This is because there are no existing or planned transportation facilities within the Sutter Buttes Ozone Nonattainment Area. The Sutter Buttes Ozone Nonattainment Area is comprised solely of the top of a mountain in Sutter County, and is located entirely on private property with no public access. The air quality monitor placed atop the Buttes registers the area as exceeding Federal ozone standards even though there are no sources of pollutant emissions within the Area itself.

The conformity determination requirement for the Sutter Buttes Ozone Nonattainment Area has been met without any further emissions analysis because the planning analysis years [93.122(g)(2)], and the emissions predicted in the Build scenario are not greater than the emissions predicted in the No-Build scenario for all analysis years [93.119(a)].

EMISSIONS BUDGET TEST FOR PM₁₀

Under the emissions budget test, all future year PM₁₀ emissions associated with the 2023 MTP Amendment #1 and 2025 MTIP must be equal to or less than the budgets established in the 2010 PM₁₀ Implementation/Maintenance Plan and Redesignation Request for Sacramento County for the Sacramento PM₁₀ Maintenance Area. The emissions budgets in the Maintenance Plan for 2022 was approved by EPA on September 26, 2013 and became effective October 28, 2013. The budgets for

the second PM₁₀ 10-year maintenance plan were approved by EPA on March 14, 2024, effective April 15, 2024.

Appendix C, Table 5A, shows that PM₁₀ emissions associated with this analysis are less than the budgets contained in the Implementation/Maintenance Plan for the Sacramento PM₁₀ Nonattainment Area for all future years. Appendix C, Table 5A, shows that PM₁₀ associated with this analysis are less than the budgets contained in the Second Maintenance Plan for Sacramento PM₁₀ Nonattainment Area for all future years. Tables 5B, 5C, and 5D shows the calculations for paved road dust and road construction dust component, which goes into the final PM₁₀ emission analysis.

INTERIM BASELINE TEST FOR THE SACRAMENTO PM_{2.5} NONATTAINMENT AREA

In the Interim Baseline test, all future year emissions associated with the 2025 MTIP and concurrent MTP Amendment must be less than or equal to emissions from the transportation system based on the Baseline scenario, to demonstrate conformity.

The motor vehicle activity forecasts for the 2025 MTIP and concurrent MTP Amendment for the Baseline year and Build scenarios in the Sacramento area across the various horizon years are shown in Appendix C, Table 1. These forecasts are converted to motor vehicle emission estimates by SACOG using EMFAC 2017.

Appendix C, Table 6A, presents the results of the Interim Baseline test for the PM_{2.5} emissions and the NOx precursor. The analyses indicate that the motor vehicle emissions are lower under the build scenario when compared to the Baseline scenario.

EMISSIONS BUDGET TEST FOR THE YUBA CITY-MARYSVILLE PM_{2.5} NONATTAINMENT AREA

Under the emissions budget test, all future year PM_{2.5} emissions associated with the 2025 MTIP and concurrent MTP Amendment must be equal to or less than the budgets identified in the *2014 Yuba City-Marysville PM_{2.5} Maintenance Plan and Redesignation Request* for the Yuba City-Marysville Nonattainment Area. The emissions budget in the Maintenance Plan for 2024 was found adequate by EPA in a letter issued August 12, 2014.

Appendix C, Table 6B1, shows that PM_{2.5} emissions associated with this analysis are less than the budgets identified in the maintenance plan for the Yuba City-Marysville Nonattainment Area for all future years. Appendix C, Table 6B2, shows that PM_{2.5} emissions associated with this analysis are less than the proposed budgets identified in the pending maintenance plan for the Yuba City-Marysville Nonattainment Area.

IMPLEMENTATION OF TRANSPORTATION CONTROL MEASURES

The 2025 MTIP and concurrent MTP Amendment provides for both priority and timely completion/implementation of the transportation control measures (TCMs) in the applicable air quality plans. Appendix D of the *2009 Sacramento Regional 8-Hour Ozone Attainment and Reasonable Further Progress Plan* included 43 TCMs for the SVAB; 2018 finalizes completion of these TCMs. The *Sacramento Regional 2008 NAAQS 8-Hour Ozone Attainment and Reasonable Further Progress Plan*

continued one of the TCMs through 2024. The TCM has been expanded through 2032. Timely implementation documentation on this measure is contained in Appendix D of this document. (§93.113).

PUBLIC PARTICIPATION PROCESS

Review of this document is part of the conformity consultation process as required under Sections 93.105 (a) (2), 93.105 (c) (1), and 93.105 (e) and is consistent with the public involvement procedures under 23 CFR 450 (93.112). This draft air quality conformity analysis was circulated for thirty days to give all affected parties an opportunity to comment. The SACOG Board of Directors is scheduled to act on this conformity determination at its September 19th, 2024 meeting. Any comments received by SACOG during the comment period will be included, along with staff's responses, with the final conformity submittal package as part of Appendix G.

SACOG follows the procedures outlined in its Public Participation Plan for amendments and adoptions to our plans and programs which require a conformity analysis. SACOG's Public Participation Plan (PPP), updated October 2021 outlines the techniques employed by SACOG to help facilitate public participation during the development of the MTP, and any amendments, and solicitation of projects for the MTIP. SACOG's Public Participation Plan provides for early and continuing participation in our long-range transportation plans, our project-selection or programming process (i.e., Federal TIP), and the air-quality "conformity" determination and environmental reviews associated with these plans and programs.

The Regional Planning Partnership (RPP), a committee established by the SACOG Board of Directors to review all conformity determinations and assumptions (see Appendix E), was asked to review and approve a set of assumptions for use in future conformity determinations. The Partnership approved the assumptions used in this conformity determination on January 26, 2023 (see Appendix C, Table 7).

RESOLUTION OF APPROVAL

A copy of the resolution of adoption finding that the 2025 MTIP and concurrent MTP Amendment meets federal conformity requirements is included as Appendix F. The SACOG Board is scheduled to act on this conformity submittal at its September 2024 meeting.

CONCLUSION

The results of the emissions analysis show that the 2025 MTIP and concurrent MTP Amendment meets the emissions conformity tests based on the Transportation Conformity requirements found in the Federal Clean Air Act, Section 176(c) (42 U.S.C. 7506(c)), and Title 40, Code of Federal Regulations, Part 93, Subpart A for the Sacramento ozone, PM₁₀, and PM_{2.5} areas; the Yuba City-Marysville PM_{2.5} area; and the Sutter Buttes Ozone Nonattainment Area.

Part 93, Subpart A for the Sacramento ozone, PM_{10} , and $PM_{2.5}$ areas; the Yuba City-Marysville $PM_{2.5}$ area; and the Sutter Buttes Ozone Nonattainment Area.

Notes:

¹ See Figure 1 for specific areas and geographies for each emissions factor.² Where mentioned "Budget" figures come from the latest adopted State Implementation Plan or motor vehicle emissions budget adequacy finding.³ Indicates which season is used for setting EMFAC2017 for estimating emissions.⁴ 2026 is modeled to reflect the attainment year for the 2015 standard. 2026 is a budget year for ozone and PM_{2.5} for Yuba City-Marysville Maintenance Area.⁵ 2029 and 2032 are two proposed budget years for 70 ppb 8-hr ozone SIP⁶ 2033 is an attainment year for PM₁₀ under the second PM₁₀ 10-year maintenance plan.⁷ These are the milestone forecast years for SACOG's regional travel demand modeling input files (e.g. land use, population, employment and demographic files). Vehicle activity forecasts needed for interim years are generated by interpolating input files by subarea, and running the travel demand model with travel networks for the air quality conformity analysis years.⁸ These are the milestone forecast years of MTC's regional travel demand modeling input files. For ozone and PM_{2.5} analysis, MTC provides to SACOG travel demand model vehicle activity files for eastern Solano County for these milestone years. For ozone and PM_{2.5} conformity analysis years which fall between the milestone years, SACOG staff interpolates the given vehicle activity data using average annual growth factors.⁹ The "2014 Yuba City-Marysville PM_{2.5} Maintenance Plan and Redesignation Request" budgets were found adequate by EPA in a letter dated August 12, 2014; effective September 9, 2014. The proposed budgets in the second 10-yr maintenance plan for 2026 and 2035 are pending.¹⁰ The budgets for the second PM₁₀ 10-year maintenance plan were approved by EPA on March 14, 2024 and effective April 15, 2024.¹¹ The "Sacramento Regional 2008 NAAQS 8-Hour Ozone Attainment Plan and Reasonable Further Progress Plan," and the Sacramento Metro Area portion of the "2018 Updates to the California State Implementation Plan" were approved by the EPA on October 22, 2021. Budgets became effective on October 22, 2021.¹² 2027 is a budget year for the second 10-year PM₁₀ maintenance plan for Sacramento County.¹³ 2035 is a budget year in the second PM_{2.5} 10-year maintenance plan for Yuba City - Marysville area.

Italicized numbers are interpolated from milestone years.

Notes:

¹ Population and employment for the SACOG area are from SACOG projections prepared in 2018 for the 2020 MTP/SCS. Milestone years for population and employment projections are: 2016, 2027, 2035, and 2040. Population and employment for other analysis years are interpolated from the milestone years by subarea using annual average growth rates. Projections are shown for the entire SACOG modeling area as shown in Figure 1.

² Vehicle miles traveled are reported from SACOG's "SACSIM" regional travel demand model for the entire SACOG modeling area as shown in Figure 1. Vehicle activities are explicitly modeled for all analysis years, using the above population and employment data. These vehicle activity forecasts provide the inputs to EMFAC2017 for the geographies and emissions tests shown in Table 1 and Figure 1.

³ For PM_{2.5} and the ozone pre-cursors (NOX, ROG), MTC provides Eastern Solano County vehicle activity estimates to SACOG for use in its conformity analysis. MTC's milestone years are: 2020, 2030, 2035, and 2040. VMT and vehicle population for 2026, 2027, 2029, 2032, 2033, 2035, and 2044 are interpolated/extrapolated from the given milestone year data. Interpolation/extrapolation was performed by SACOG staff, using average annual growth rates between milestone years.

Air Quality Conformity Assumptions

Assumption 1: The SACOG Board adopted population, household, housing, and employment projections for the years 2035 and 2040 at its November 2019 meeting concurrent with the adoption of the 2020 Metropolitan Transportation Plan / Sustainable Communities Strategy (MTP/SCS). A forecast to 2050 was approved by the SACOG Board in February 2022. These land use projections will be used for this conformity analysis and determination. Vehicle activities for all other milestone years will be interpolated using the available full model runs for 2016, 2027, 2035, and 2040. Horizon year 2044 will be developed utilizing an assignment only model run. These projections meet the current definition of “latest planning assumptions.”

Assumption 2: Emissions Factor (EMFAC) 2017 and approved off-model adjustments will be used to develop emission estimates for the conformity analysis and determination associated with the adoption of the 2025 Metropolitan Transportation Improvement Program (MTIP). The emission budgets used in the conformity determination are the 8-Hour Ozone (2008 standard) emission budgets. These budgets were found adequate by EPA on October 22, 2021 and became effective November 22, 2021. Particulate Matter (PM₁₀) will use budgets which were found adequate by EPA on November 23, 2011 and became effective December 8, 2011; or adjusted budgets based upon pending EPA approval of the Second Maintenance Plan. Fine Particulate Matter (PM_{2.5}) will use the Yuba City-Marysville Area budgets found adequate August 25, 2014 and became effective September 9, 2014; or adjusted budgets based upon pending EPA approval of the Second Maintenance Plan.

Assumption 3: SACOG will use the most recent emission control factors supplied by the California Air Resources Board (CARB) for use in any future conformity determination. The EMFAC 2017 model is used to determine emission control factors; it uses vehicle fleet assumptions that meet the current definition of “latest planning assumptions.”

Assumption 4: SACOG will continue to incorporate emission estimates for the part of Solano County within the Sacramento Federal Ozone Nonattainment Area and federal PM_{2.5} nonattainment area in all future conformity determinations as agreed to under SACOG’s existing Memorandum of Understanding (MOU) with the Metropolitan Transportation Commission (MTC).

Assumption 5: On-road control measures from the Ozone SIP that are not reflected in the EMFAC 2017 baseline will be documented.

Assumption 6: SACOG will use the assumptions on transit fares, auto operating costs, and parking costs consistent with the 2020 SCS and 2023 MTP analysis in the conformity analysis and determination. The transit fares projections are derived from the financing portion of the 2020 SCS and 2023 MTP development. The auto operating costs projections were developed in coordination with other California MPOs for the third round of Sustainable Community Strategies. The parking costs are market-based projections using employment development patterns and densities as the main explanatory variables.

APPENDIX D—TIMELY IMPLEMENTATION DOCUMENTATION FOR TRANSPORTATION CONTROL MEASURES (TCMs)

TCM ID	Lead Agency	SACOG ID	Measure Title	Description	TCM Status Summary
AQ-3	SMAQMD	VAR56292	Spare the Air	<p>The “Spare the Air” program is a year-round public education program with an episodic ozone reduction element during the summer ozone season, plus general awareness throughout the rest of the year. It is designed to inform people when air quality is unhealthy and achieve voluntary emission reductions by encouraging them to reduce vehicle trips.</p>	<p>TCM has been continuously implemented through 2018. This TCM has been proposed for extension through 2032 as part of the 2008 Ozone SIP.</p>

APPENDIX E—CHARGE OF THE RPP

SACRAMENTO AREA COUNCIL OF GOVERNMENTS
REGIONAL PLANNING PARTNERSHIP
CHARGE

PURPOSE

The purpose of this Partnership is to assist SACOG with its transportation and air quality planning and programming processes, with an emphasis on technical issues, by providing consultation with a broad range of public and private constituencies. In addition, this partnership will help meet the inter-agency consultation requirements of both the Transportation Equity Act of the 21st Century (TEA-21) and the consultation requirements of the Federal Clean Air Act. Both of these laws require that SACOG provide for early and on-going public participation in our long-range transportation plans, project-selection or programming process, and air quality conformity determinations.

Activities of the Partnership may include, but are not limited to: developing roles and responsibilities for continuing a well-defined inter-agency consultation procedure for reviewing plans, programs, and projects; developing a process for responding to significant comments of involved agencies, individuals, and organizations; selection and adoption of planning assumptions and models; developing procedures for the conduct of transportation-air quality analysis, and for making findings of conformity; information sharing and discussing ideas and proposals that are of importance to SACOG and Partnership member groups.

The Partnership may establish such subcommittees, task forces, or study groups as it deems appropriate to carry out its charge.

MEMBERSHIP

The Partnership membership will consist of representatives from the following organizations:

1. Public Works and planning directors from each jurisdiction within the Sacramento Metropolitan Planning Area.
2. County-level transportation agencies such as the Placer County Transportation Planning Agency (PCTPA), the El Dorado County Transportation Commission (EDCTC), the Yolo County Transportation District (YCTD), and the Sacramento Transportation Authority (STA).
3. Metropolitan Transportation Commission (MTC) and Solano Transportation Authority.
4. Federal Highway Administration-California Division (FHWA), Federal Transit Administration - Region IX (FTA), Environmental Protection Agency - Region IX (EPA), Air Resources Board (ARB), Caltrans - District 3, and the California Highway Patrol - Valley Division.
5. Sacramento Regional Transit District
6. Air districts within the ozone nonattainment area.
7. Sacramento-Yolo Port District.
8. Sacramento County Division of Airports.
9. Transportation Management Associations (TMAs).
10. SACOG's Transit Coordinating Committee.
11. SACOG's Freight Advisory Council.
12. SACOG's Bicycle and Pedestrian Advisory Committee.
13. Environmental advocacy groups.

14. Social equity, disability, and minority advocacy groups.
15. Business/Chamber of Commerce groups.
16. Indian tribes within the SACOG region.
17. Organized labor.

Requests for membership on the Partnership from agencies or organizations not listed will be subject to recommendation by the Partnership and acted upon by the SACOG Board of Directors.

OFFICERS

SACOG staff will preside over the meetings.

VOTING

Recommendations to the Work Program Committee and the SACOG Board will be by consensus. If a full consensus cannot be reached on a recommendation, minority reports will also be forwarded to the Work Program Committee and Board for their consideration.

MEETINGS

The Partnership will hold regularly scheduled meetings. Special meetings may be called, as needed. All meetings will be open to the public. Agendas will be posted in the SACOG lobby as well as on the web page, www.sacog.org.

APPENDIX F—RESOLUTION OF ADOPTION AND PUBLIC NOTICE

SACRAMENTO AREA COUNCIL OF GOVERNMENTS

RESOLUTION NO. XX – 2024

APPROVING THE JOINT CONFORMITY DETERMINATION ON THE 2023 METROPOLITAN TRANSPORTATION PLAN/SUSTAINABLE COMMUNITIES STRATEGY AMENDMENT #1 (2023 MTP/SCS) AND THE 2025 METROPOLITAN TRANSPORTATION IMPROVEMENT PROGRAM (MTIP)

WHEREAS, SACOG, is the designated Metropolitan Planning Organization (MPO) for the Sacramento metropolitan planning area as defined by Section 134(c) of the Federal Highway Act, as well as for the Yuba City-Marysville urbanized area; and

WHEREAS, SACOG and the Secretary of California State Transportation Agency have executed memoranda of understanding (MOUs) with both the Placer County Transportation Planning Agency (PCTPA) and the El Dorado County Transportation Commission (EDCTC) which establish a framework of representation for how SACOG will carry out its federal MPO responsibilities in both El Dorado and Placer counties in cooperation and coordination with the agencies and jurisdictions in those areas within the ozone nonattainment area; and

WHEREAS, federal planning regulations require SACOG as an MPO to prepare and adopt a long-range Metropolitan Transportation Plan (MTP) for the region; and

WHEREAS, state law requires SACOG to adopt a Sustainable Communities Strategy (SCS), which SACOG has combined with the MTP; and

WHEREAS, federal planning regulations require SACOG as MPO to prepare and adopt a Metropolitan Transportation Improvement Program (MTIP) for the region; and

WHEREAS, the 2023 MTP/SCS #1 has been prepared to comply with federal and state requirements; and

WHEREAS, the 2025 MTIP has been prepared to comply with federal and state requirements; and

WHEREAS, these documents have been developed and reviewed through the public participation process defined in SACOG’s Public Participation Plan; and

WHEREAS, the 2023 MTP/SCS #1, the 2025 MTIP, and the corresponding Conformity Analysis are consistent; and

WHEREAS, the 2025 MTIP meets all applicable transportation planning requirements pursuant to 23 CFR Part 450; and

WHEREAS, the projects submitted within the 2025 MTIP must be financially constrained and the financial plan affirms that funding is available; and

WHEREAS, SACOG has integrated into its metropolitan transportation planning process, directly or by reference, the goals, objectives, performance measures, and targets described in other State transportation plans and transportation processes, as well as any plans developed under 49 U.S.C. Chapter 53 by providers of public transportation, required as part of a performance-based program; and

WHEREAS, the 2025 MTIP includes a discussion as to the effect of the programmed investments toward achieving performance targets as required in 23 CFR 450.218(q) and 450.326(d); and

WHEREAS, the 2023 MTP/SCS #1 and the 2025 MTIP include a new Conformity Analysis; and

WHEREAS, SACOG must demonstrate conformity pursuant to 40 CFR Part 93 for the 2023 MTP/SCS #1 and 2025 MTIP; and

WHEREAS, the 2023 MTP/SCS #1 and the 2025 MTIP do not interfere with the timely implementation of the region’s Transportation Control Measures; and

WHEREAS, the 2023 MTP/SCS #1 and the 2025 MTIP conform to the applicable State Implementation Plans for air quality; and

WHEREAS, the 2023 MTP/SCS achieved greenhouse gas reduction targets established by the CARB and met the requirements of SB 375; and

WHEREAS, the documents have been widely circulated and reviewed by SACOG advisory committees representing the technical and management staffs of SACOG’s member agencies; representatives of other governmental agencies, including state and federal; representatives of special interest groups; representatives of the private business sector; and residents of the SACOG region consistent with the public participation plan adopted by SACOG; and

WHEREAS, a public hearing was conducted on August 1, 2024, to hear and consider comments on the joint Conformity Determination on the 2023 MTP/SCS #1 and 2025 MTIP.

NOW, THEREFORE, BE IT RESOLVED, that SACOG finds the foregoing recitals true and correct and incorporated by this reference.

BE IT FURTHER RESOLVED, that SACOG approves and adopts the joint Conformity Determination on the 2023 MTP/SCS #1 and the 2025 MTIP.

BE IT FURTHER RESOLVED, that SACOG finds that the 2023 MTP/SCS #1 and the 2025 MTIP are in conformity with the requirements of the Federal Clean Air Act Amendments and applicable State Implementation Plans for air quality.

BE IT FURTHER RESOLVED, that SACOG staff is hereby directed and authorized to work with the California Department of Transportation, the Federal Highway Administration, the Federal Transit Administration, and the U.S. Environmental Protection Agency to make whatever technical changes or corrections are needed to the content, format and organization of the documents to obtain its approval by these agencies.

NOTICE OF PUBLIC HEARING AND AVAILABILITY OF THE DRAFT 2025 MTIP, AMENDMENT #1 TO THE 2023 MTP/SCS, AND AIR QUALITY CONFORMITY ANALYSIS

The Sacramento Area Council of Governments (SACOG) is pleased to announce the release of the following documents on July 1, 2024:

- Draft 2025 Metropolitan Transportation Improvement Program (2025 MTIP)
- Draft Amendment #1 to the 2023 Metropolitan Transportation Plan/Sustainable Communities Strategy (2023 MTP/SCS)
- Draft Air Quality Conformity Analysis, associated with the proposed 2025 MTIP and 2023 MTP/SCS Amendment #1

A public hearing on the 2025 MTIP, Amendment #1 to the 2023 MTP/SCS, and Air Quality Conformity Analysis will be held on August 1, 2024, during the Transportation Committee meeting which begins at 10:00 a.m. at 1415 L Street, Suite 300, Sacramento CA or online at <https://www.sacog.org/meetings/meeting-agendas>. Please select the August 1, 2024 Transportation Committee meeting and Interactive Agenda to access the link at the time of the meeting.

- Copies of the documents are available as follows:
- Access online at: <https://www.sacog.org/funding/transportation-improvement-programs>
- Review printed copy during normal business hours at SACOG offices prior to August 1, 2024
- Request a printed copy for a fee or an electronic copy for free from SACOG

The public comment period will begin on July 1, 2024 and end on August 2, 2024. Comments should be submitted by Friday August 2, 2024 to mtip@sacog.org. Please contact SACOG staff with any questions at mtip@sacog.org.

Public notice of public involvement activities and time established for public review and comments on the MTIP will satisfy the program of projects (POP) requirements, as defined in FTA Circular 9030.1E.
